DEVELOPERS FOR BLACK-AND-WHITE PHOTOGRAPHIC PAPERS

FOMATOL LQN

In general
High-durable liquid concentrate of a phenidone-hydroquinone normal-working positive developer.

Use
The developer is designed for the manual and automatic processing of all sorts of black-and-white photographic papers.

Dilution
Manual processing: 1 part of concentrate + 7 parts of water
Automatic processing 1 part of concentrate + 4 parts of water

Developing capacity
1 litre of ready-to-use developer (dilution 1 + 7) is sufficient to develop 1,5 sq. m and 3 sq. m of photopaper on baryta and resin-coated paper base (RC) respectively.
Recommended replenishment rate for the automatic processing:
200 ml of ready-to-use developer (dilution 1 + 4) per 1 sq. m of photopaper.

Packaging
PE-bottle of 250 ml
PE-canister of 5 litres

FOMATOL P

In general
Two-component, phenidone-isoascorbate normal-working positive developer in powder form.

Use
The developer is designed for the manual processing of all sorts of black-and-white photographic papers.

Preparation of working solution
Dissolve the content of the bigger bag and then of the smaller bag in 2 litres of warm water (40 °C) and after a complete dissolution fill up with water to the final volume of 2,5 litre.

Developing capacity
One package of the developer is sufficient to develop 3,75 sq. m and 7,5 sq. m of photopaper on baryta and resion-coated (RC) paper base respectively.

Packaging
Box containing two PE-bags of 186 g total weight.

FOMATOL H

In general
Two-component **phenidone-hydroquinone**, normal-working positive developer in powder form.

Use
The developer is designed for the manual processing of black-and-white positive photomaterials.

Preparation of working solution
The content of the smaller and then of the bigger bag is dissolved in 800 ml of warm water (50 to 70 °C) and the solution is filled up with water to the final volume of 1 litre.

Developing capacity
One package is sufficient to develop 1,5 sq. m. and 3 sq. m. of photopapers on a baryta and resin-coated (RC) paper base respectively.

Packaging
Box containing 2 PE-bags of 45 g total weight.

FOMATOL PW

In general
Specially formulated positive developer in powder form, preferably designed for the processing of Fomatone MG-line photographic papers. The developer features slower developing kinetic, lower speed utilization and a warm image tone.

Use
The developer is designed for the manual processing of Fomatone MG-line photographic papers and Fomalux.

Preparation of working solution
Dissolve the content of the bigger and then of the smaller bag in 700 ml of warm water (40 °C) and after a complete dissolution fill up with water to the final volume of 1 litre. By further dilution of the developer and with shorter development times from the range shown in the table below, the warm image tone of Fomatone MG-line photographic papers will become stronger.

Developing capacity
One package is sufficient to develop 2 – 3 sq. m of Fomatone MG-line photographic papers. To keep the stability of processing constant, the working solution of developer should not be long-term storaged.

Packaging
Box containing two PE-bags of 66 g total weight.

FOMA UNIVERSAL DEVELOPER

In general
Two-component phenidone-hydroquinone, normal-working developer in powder form.

Use
The developer is designed for the manual and automatic processing of all sorts of black-and-white negative and positive photomaterials.

Preparation of working solution
(for 1 litre of developer)
The content of the smaller and then of the bigger bag is dissolved in 800 ml of warm water (50 to 70 °C) and the solution is filled up with water to the final volume of 1 litre.

Dilution
Films: 1 part of developer + 3 parts of water.
Photopapers: For the processing of photopapers, the developer should be used undiluted.

Developing capacity
One litre of ready-to-use developer is sufficient to develop up to 12 perforated films or rollfilms, or corresponding amount of sheet films, or 1.5 sq. m. and 3 sq. m. of photopapers on a baryta and resin-coated (RC) paper base respectively.

Packaging
Box containing 2 PE-bags of 44 g total weight for 1 litre developer.
Box containing 2 PE-bags of 220 g total weight for 5 litres of developer.
